

Resin Bound Gravel Base specifications

Sub-substrate

The sub-substrate should be 150mm of compacted MoT Type 1.

Substrate

50mm of open-textured macadam is ideal.

It is not essential but 14mm graded open textured macadam will ensure system porosity through to the subsoil.

Resin Bound Gravel Surface

Specified depth of Abacus Resin Bound Gravel Surface is the final layer.

Edge Kerb and Aluminium Trim

Edging kerb and aluminium trim are used in order to give the resin bound gravel surface a neat edge finish.

One or both of these edgings must surround the entire installation. "Raw" edges will break up in use if not protected by edge trim.
