Game Description

Colour Catcher

The floor game Colour Catcher tests your dexterity.

Step 1: A game leader is selected, who may give the commands.

Step 2: The game leader selects an extremity.

Step 3: Once the extremity is selected, a small ball or other object is thrown onto the Colour Catcher Guide field by the game leader. The colour of the field on which the ball remains is decisive. If no guide is available, a colour cube can be chosen optionally.

Step 4: The game leader calls the chosen extremity and the corresponding colour and the other players must touch the chosen colour with the corresponding extremity. For example: „Right hand on red“.

Step 5: The game leader repeats the first two steps for all other extremities.

Step 6: The player who holds out without falling over wins the game!

Game Description
Snake & Ladders

In the game Snake & Ladders the players have to roll the dice. The start is at the starting point. The number rolled indicates the number of steps the player is allowed to take in his turn. The player who reaches the finish line first wins the game. However, there are also obstacles in the game, such as the snake or the bomb, which move the players back by a few squares. If the player lands on a field with a ladder, the player may either climb a few fields or fall down from it and fall back a few fields.

XL	200.06 x 699.80

Floor Game „Ludo“

XL | 400.00 x 350.00

Game Description

Ludo

Each player must move from the starting point clockwise along the cross to the end circles. First, it is determined who will start. The first player rolls the dice and runs from the starting point along the playing field according to the number of eyes on the dice. Then it is the turn of the next player.

The player who rolls a 6 has special luck, because he gets another roll through this 6. If a player comes, by the number on the dice, on a square on which another player is already standing, he is „beaten“ and must return to his starting point.

Once a player has completely circled the outer cross, he moves to the squares of his colour. You can only move into the end squares if you roll the exact number on the free squares.

The first player to reach his final position wins.

The players can then decide whether the game ends after that or whether the others still play for the lower places.
